

# Without GOOD POLICY MANAGEMENT

*your Anti-Virus Applications are Worthless*

## ePolicy Orchestrator

There are two questions that must be asked and answered constantly to effectively defend against virus infection: "Am I protected?" and "Am I infected?" ePolicy Orchestrator answers these questions for you. With it, you can be certain that all desktops, servers, groupware, and gateway machines are up to date with the latest virus definitions and scanning engines.

Designed specifically for the Internet, ePolicy Orchestrator is a truly scalable tool for managing and enforcing anti-virus protection and policies. It includes comprehensive policy management, detailed graphical reporting, and software deployment. Together, these tools give administrators the power to ensure virus protection more effectively than any solution in the market. Administrators can manage policies and deploy protection while generating detailed graphical reports on all McAfee and Symantec anti-virus products.

- Manages both McAfee and Symantec desktop and server products throughout your entire network.
- Responds instantly to virus outbreaks by configuring an enterprise-wide AutoUpdate, scanning manually, and generating detailed reports to pinpoint entry points and identify a pattern of propagation.
- Lets you know whether you have the latest protection, and makes it possible to update the entire network with the click of a button.
- Works as a standalone management tool or as an integral part of McAfee's Active Virus Defense and Active VirusScan Suites.

## Compare

### Compare ePolicy Orchestrator to other management tools

	McAfee	Symantec	Trend
