Theatre Sound John A. Leonard 2001 "John Leonard also discusses artistic input - working with the director and other designers - as well as the production process - putting together cue sheets, desk plots, conducting rehearsals, and operating the show. He gives special attention to musical theatre, with ample discussion of microphones, piano techs, loudspeaker rigs, and the basics of operating a musical."--BOOK JACKET.

International Review of Research in Mental Retardation 2006-04-11 Volume 31 of the International Review of Research in Mental Retardation is a thematic exploration of personality and motivation in persons with mental retardation. Looking at a broad spectrum of intellectual disabilities, Mental Retardation, Personality, and Motivational Systems explores motivation as a moderator for performance and individualized effort. Coverage includes discussions of intrinsic and extrinsic motivation in both mentally retarded and non-retarded children, self-determination, interpersonal decision making in adolescents and adults with mental retardation, interpersonal relationships, and the connection between etiological-specific differences and motivation to form "behavioral phenotypes." A final chapter presents a transactional perspective on human ability, relying on constructs of intelligence, cognitive processes, and motivation, with implications for developmental interventions in the lives of persons with mental retardation. Explores personality and motivation in persons with mental retardation Discusses intrinsic and extrinsic motivation in both mentally retarded and non-retarded children A useful reference for researchers and scholars in developmental and cognitive psychology, as well as neuropsychology

Synthesizers and Computers Brent Hurtig 1987 Computers have assumed a pivotal role in music-making as the power to convert sound into numbers creates unimaginable artistic options for the musician. The editors of Keyboard magazine have revised and expanded the original edition of this book to include the latest in technical advances and creative application for the use of computers in music. Written by Bob Moog, Roger Powell, Craig Anderson and a variety of other experts, this is an indispensable addition to the basic library of every musician today.

Low End Theory Paul C. Jasen 2017-08-24 Low End Theory probes the much-mythologized field of bass and low-frequency sound. It begins in music but quickly moves far beyond, following vibratory phenomena across time, disciplines and disparate cultural spheres (including hauntings, laboratories, organ workshops, burial mounds, sound art, studios, dancefloors, infrasonic anomalies, and a global mystery called The Hum). Low End Theory asks what it is about bass that has fascinated us for so long and made it such a busy site of bio-technological experimentation, driving developments in science, technology, the arts, and religious culture. The guiding question is not so much what we make of bass, but what it makes of us: how does it undulate and unsettle; how does it incite; how does it draw bodily thought into new equations with itself and its surroundings? Low End Theory is the first book to survey this sonorous terrain and devise a conceptual language proper to it. With its focus on sound's structuring agency and the multi-sensory aspects of sonic experience, it stands to make a transformative contribution to the study of music and sound, while pushing scholarship on affect, materiality, and the senses into fertile new territory. Through energetic and creative prose, Low End Theory works to put thought in touch with the vibratory encounter as no scholarly book has done before. Hip Hop Underground Anthony Kwame Harrison 2009-07-09 Hip Hop Underground is a vivid ethnography of the author's observations and experiences in the multiracial world of the San Francisco underground hip hop scene. While Anthony Kwame Harrison interviewed area hip hop artists for this entertaining and informative book, he also performed as the emcee "Mad Squirrel." His immersion in the subculture provides him with unique insights into this dynamic and racially diverse but close-knit community. Hip Hop Underground examines the changing nature of race among young Americans, and examines the issues of ethnic and racial identification, interaction, and understanding. Critiquing the notion that the Bay Area underground music scene is genuinely "colorblind," Harrison focuses on the issue of race to show how various ethnic groups engage hip hop in remarkably divergent ways—as a means to both claim subcultural legitimacy and establish their racial authenticity.

Waves and Forms Basile Zimmermann 2015-05-22 An examination of the relationship between technical objects and culture in contemporary China, drawing on concepts from science and technology studies. Technical objects constrain what users do with them. They are not neutral entities but embody information, choices, values, assumptions, or even mistakes embedded by designers. What happens when a technology is designed in one culture and used in another? What happens, for example, when a Chinese user is confronted

by Roman-alphabet-embedded interfaces? In this book, Basile Zimmermann examines the relationship between technical objects and culture in contemporary China, drawing on concepts from science and technology studies (STS). He presents a new theoretical framework for "culture" based on the notions of waves and forms, which provides a powerful descriptive toolkit for technology and culture. The materials Zimmermann uses to develop and illustrate his theoretical arguments come from three groups of case studies about the use of technical devices in today's China. The first and most extensive group consists of observations of electronic music devices in Beijing; the second is a study of a Chinese networking site, "Happy Network"; and the third is a collection of personal, small-scale observations on the way Chinese characters behave when located in alphabet-encoded devices such as mobile phones, web pages, or printed documents. Zimmermann discusses well-known frameworks from STS and combines them with propositions and topics from Chinese studies. Each of the case studies advances his theoretical argument. Zimmermann's account shows how cultural differences can be integrated into STS research, and how sinologists can turn their attention from ancient texts and traditional art to everyday things in present-day China.
