Utilities Reform in Twenty-First Century Australia Malcolm Abbott 2021-07-01 Utilities Reform in 21st Century Australia: Providing the Essentials traces the development and consequences of the economic reform measures undertaken in the utilities sector in Australia (communications, energy, water/wastewater services, and transport) in the last years of the 20th century, and early decades of the 21st century. In doing so, it looks at the process of reform across industries, and across the state and federal jurisdictions, to identify what motivations the various governments had for pursuing reform, how change varied across jurisdictions, and what issues arose in the process. Although by the mid-1990s all states and territories and the Australian Government were committed to reforming utilities as part of the National Competition Policy, not all pursued this reform with the same degree of speed and breadth of action. The broad trends of economic reform in Australia, and abroad, are also touched upon, to provide an outline of the wider context in which the reform of the utilities occurred. This book, therefore, explores the relationship between politics and society on the one hand and economic reform on the other; as well on as the efforts of governments in Australia to promote economic growth and the wealth of

Australians in an increasingly complex and challenging global economic climate.

An Introduction to Accounting: Accountability in Organisations and Society Craig Deegan 2019-06-01 Written by one of ANZ's premier sustainability and social accounting academics, An Introduction to Accounting: Accountability in Organisations and Society brings today's accounting hot topics of corporate accountability, sustainability and social responsibility to life with the only complete textbook created from the ground up for these modern accounting teaching and learning concepts. An Introduction to Accounting: Accountability in Organisations and Society takes a unique approach in embracing from the start the notion of accountability for the environment and sustainability in accounting; the structure, content and learning activities provide students with an understanding of accounting's pervasive and transformative role as a social practice and organisational driver. It shows that environments, ideas and values change; the interconnectivity of society; that the planet must be respected as a resource; and that people are affected/influenced by the information they receive and the way it is presented. It is emphasised that accounting and accountability are key aspects of every person's life and that the practice of accounting, while often being seen as very technical in nature, has many social implications. Learning accounting through the lens of sustainability and the environment embeds this perspective in students' minds so that in their careers they will actively seek and use accounting information to make decisions that take into consideration accountability for the environment. Circus, Science and Technology Anna-Sophie Jürgens 2020-06-22 This book explores the circus as a site in and through which science and technology are represented in popular culture. Across eight chapters written by leading scholars - from fields as varied as performance and circus studies, art, media and cultural history, and engineering - the book discusses to what extent the engineering of circus and performing bodies can be understood as a strategy to promote awe, how technological inventions have shaped circus and the cultures it helps constitute, and how much of a mutual shaping this is. What kind of cultural and aesthetic effects does engineering in circus contexts achieve? How do technological inventions and innovations impact on the circus? How does the link between circus and technology manifest in representations and interpretations - imaginaries - of the circus in other media and popular culture? Circus, Science and Technology examines the ways circus can provide a versatile frame for interpreting our relationship with technology.
