Here’s how Scott describes this book’s brilliant premise: “If you and I were out on a shoot, and you asked me, ‘Hey, how do I get this flower to be in focus, with the background out of focus?,’ I wouldn’t stand there and give you a photography lecture. In real life, I’d just say, ‘Put on your zoom lens, set your f-stop to f/2.8, focus on the flower, and fire away.’ That’s what this book is all about: you and I out shooting where I answer questions, give you advice, and share the secrets I’ve learned just like I would with a friend—without all the technical explanations and techie photo speak.”

This isn’t a book of theory—full of confusing jargon and detailed concepts. This is a book on which button to push, which setting to use, and when to use it. With over

200 of the most closely guarded photographic “tricks of the trade,” this book gets you shooting dramatically better-looking, sharper, more colorful, more professional-looking photos every time.

Each page covers a single concept that makes your photography better. Every time you turn the page, you’ll learn another pro setting, tool, or trick to transform your work from snapshots into gallery prints. If you’re tired of taking shots that look “okay,” and if you’re tired of looking in photography magazines and thinking, “Why don’t my shots look like that?” then this is the book for you.

NUEVOS RELATOS FOTOGRAFICOS Juan Bufill 2017-01-30 'A New Generation of Photographers' has three principal aims. Firstly, it is a statement about a new generation, bringing together important works by 16 emerging photographers. Almost all the participants, from various countries, were born in the 1970s and 1980s. The selection focuses on photographers working in Catalonia and Spain. Secondly, this exhibition offers a perspective on new modes of photographic expression in the twenty-first century. The most noteworthy characteristic of the moment has been the rise of group photography, where stories unfold in ways that are narrative, documentary, conceptual and poetical. Finally, in terms of subject matter, the photographic series presented here contemplate and consider some of the fundamental and defining questions of our time. All told, they constitute a reflection on the human condition in these nascent years of the new millennium. Photos throughout

3D Recording and Interpretation for Maritime Archaeology Wendy van Duivenvoorde 2020-10-08 This open access peer-reviewed volume was inspired by the UNESCO UNITWIN Network for Underwater Archaeology International Workshop held at Flinders University, Adelaide, Australia in November 2016. Content is based on, but not limited to, the work presented at the workshop which was dedicated to 3D recording and interpretation for maritime archaeology. The volume consists of contributions from leading international experts as well as up-and-coming early career researchers from around the globe. The content of the book includes recording and analysis of maritime archaeology through emerging technologies, including both practical and theoretical contributions. Topics include photogrammetric recording, laser scanning, marine geophysical 3D survey techniques, virtual reality, 3D modelling and reconstruction, data integration and Geographic Information Systems. The principal incentive for this publication is the ongoing rapid shift in the methodologies of maritime archaeology within recent years and a marked increase in the use of 3D and digital approaches. This convergence of digital technologies such as underwater photography and photogrammetry, 3D sonar, 3D virtual reality, and 3D printing has highlighted a pressing need for these new methodologies to be considered together, both in terms of defining the state-of-the-art and for consideration of future directions. As a scholarly publication, the audience for the book includes students and researchers, as well as professionals working in various aspects of archaeology, heritage management, education, museums, and public policy. It will be of special interest to those working in the field of coastal cultural resource management and underwater archaeology but will also be of broader interest to anyone interested in archaeology and to those in other disciplines who are now engaging with 3D recording and visualization. Coders Clive Thompson 2020-03-05 Masterful . . . [Thompson] illuminates both the fascinating coders and the bewildering technological forces that are transforming the world in which we live.' David Grann, author of The Lost City of ZFacebook's algorithms shaping the news. Uber's cars flocking the streets. Revolution on Twitter and romance on Tinder. We live in a world constructed of computer code. Coders - software programmers - are the people who built it for us. And yet their worlds and minds are little known to outsiders. In Coders, Wired columnist Clive Thompson presents a brilliantly original anthropological reckoning with the most influential tribe in today's world, interrogating who they are, how they think, what they value, what qualifies as greatness in their world, and what should give us pause.One of the most prominent journalists writing on technology today, Clive Thompson takes us into the minds of coders, the most quietly influential people on the planet, in a journey into the heart of the machine - and the men and women who made it.

The Idea of Man Ming Thein 2014-12-29 For as long as man has consciously existed - really lived - we have questioned the nature and purpose of our own existence; why are we here?
